

ColdStream®

Inbound Program Real-Time System

Full Cold Chain Visibility—Now Includes Location

Today's consumers demand high-quality fresh foods year round and in greater variety than ever before. To meet that need, supermarkets must source foods from multiple and distant geographic locations, making supply and cold chain management an increasingly complex task. An artful balance of powerful tools—including hardware, software, data analysis, and expertise—is now needed to maximize visibility and control when managing these complex, temperature-sensitive supply chains.

Savvy food companies know that understanding the data collected through their cold chain programs gives them an advantage when it comes to delivering quality. Sensitech customers have several options:

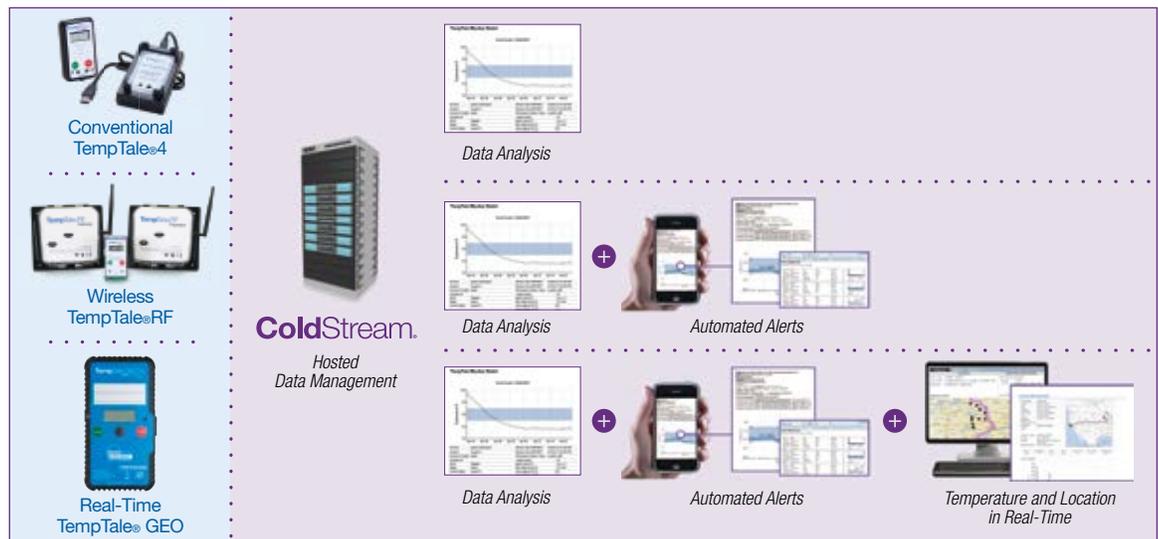

- Manually download trip records from a TempTale® USB (or conventional TempTale® monitor in conjunction with an Interface Plus) directly into the ColdStream® system for Internet-hosted data management.

- For products requiring robust temperature records, TempTale® RF monitors collect the data and download automatically through radio frequency.
- And now, temperature and location data collection and transmission in real time is available to Sensitech customers with TempTale® GEO monitors.

The rising demand for higher quality along with the increased affordability of electronic temperature monitoring has brought cold chain management into the mainstream. Use TempTale GEO monitors for highly perishable or time-sensitive shipments, alongside TempTale RF monitors for shipments requiring comprehensive FSMA (Food Safety Modernization Act) record keeping, and the traditional TempTale family of dataloggers for all other temperature-sensitive shipments.

Progressive Sensitech customers can now use a combination of these three data-collection methods to harvest data for the purposes of developing a culture of continuous improvement.

Benefits of Adding ColdStream® Real-Time Tracking System

ColdStream.

Inbound Program Real-Time System

Features & Benefits

- Easy to implement—practices are identical to a typical cold chain monitoring program.
- Complete service program that includes: data collection devices, software, analysis/reporting, and support.
- Full visibility when things go bad—know the what, where, when, and why.
- Transparent carrier performance to ensure you're getting what you've commissioned.
- Sophisticated notifications alert receivers so they can be prepared.
- Ability to intervene before problems become crises.
- Supports continuous improvement through relentless root cause analysis.
- Convenient and cost effective—co-exists with other cold chain monitoring programs, include radio frequency (RF).
- Product-centric monitoring through an impartial third party nets consistent results.
- Easy-to-access information for prioritizing your hands-on inspections more efficiently.
- Simplified reverse logistics.

Sensitech Inc. is a leading provider of supply and cold chain visibility solutions that enable our customers – global leaders in the food, life sciences, and industrial markets – to track, monitor and protect the quality and integrity of their temperature-sensitive products across complex supply chains. Through its logistics security division, FreightWatch International, Sensitech also offers origin-to-destination services that provide customers with real-time cargo transparency, helping them to mitigate such risks as theft, diversion, counterfeiting, and chain of custody. Sensitech Inc. is an ISO 9001:2008 company based in Beverly, Mass., with more than 36 sales, service and distribution locations around the world. Sensitech is a part of UTC Climate, Controls & Security, a unit of United Technologies Corp., a leading provider to the aerospace and building systems industries worldwide.
