

SensiGuard™ Tracks

Online Tracking & Monitoring Application

SensiGuard™ Tracks software is a secure, web-based tracking and monitoring platform that provides 24/7/365 location visibility of cargo or assets with global coverage. Location information from SensiGuard's VizComm™ real time tracking devices is presented using Google Maps™ mapping service. Customize your personal workspace with devices, geofences and georoutes to maintain a consistent view at subsequent login.

Notifications & Alerts

SensiGuard Tracks software automatically provides notification by email or SMS when defined events occur. If a tracker crosses user-defined boundaries for "safe zones" or "red zones" or if it starts or stops moving, users are sent immediate notification by email or SMS. If a tracked asset is suspected to be stolen, users can initiate tracking reports at a rapid rate using the burst mode while emergency recovery efforts are initiated to locate and regain control of the asset.

Geofences

The SensiGuard Tracks software geofence feature allows users to establish movement rules for both mobile and non-mobile assets, setting geographic boundaries for safe and acceptable travel. Define entry, re-entry or exit alerts assigned to a single or multiple tracking devices. Defining a route geofence is as simple as providing start and end point addresses, and can be adjusted by point-and-click to an acceptable distance. Or set up a geofence as a radius from a location or define polygonal zones using simple drawing tools.

Device View & Control

Because SensiGuard Tracks software is a cloud-based enterprise application, multiple devices can be monitored by multiple users at the same time. Users can control devices, change reporting intervals, and monitor battery levels and cell signal strength from the device-view dashboard. SensiGuard's VizComm™ device sensors transmit location, temperature, light, and other data to the application. Measurement ranges (upper/lower limits) can be customized to define acceptable thresholds so that alerts are issued if the sensor reports outside the range.

Administrative Tools

Designated administrators manage users and set permissions assuring that the appropriate contacts are immediately notified of conditions such as deviations from route/location, changes to device, or changes in the environment that the device is monitoring.

Mobile Application

The SensiGuard Tracks mobile app provides location visibility of cargo or assets from data provided by Sensitech GPS tracking devices to iPhone®, iPad® and iPod® users. Request a current device location, show the user location (iPhone) relative to the tracking device. The SensiGuard Tracks app displays location report details, including address, time of locate and route. Users can check device settings and sensor reports including remaining battery level.

SensiGuard™ Tracks

System Requirements

- Windows®, Mac OS®, Android®, and Linux®
- Web Browser
- Mozilla® Firefox, Apple® Safari, Google Chrome™, and Internet Explorer® 9+
- Google® Maps Views
- Map, Satellite, Hybrid, Terrain and Live Traffic (where available)
- Secure Platform (HTTPS) for secure, encrypted online device management and reporting
- Intuitive Dashboard and Controls
- Unlimited Enterprise Access

Use Google Maps mapping service in SensiGuard Tracks to track and monitor shipments, assets, and vehicles.

Geofence assets, routes and restricted locations to receive alerts when a breach occurs

Sensitech Inc. is focused on delivering supply chain visibility solutions that track, monitor and protect products for global leaders in the food, life sciences, consumer goods, and industrial markets. Our solutions are focused in three key areas: quality and compliance, supply chain security, and logistics performance management. Quality and compliance solutions address temperature-sensitive, complex supply chains focused on delivering the highest quality possible, while our supply chain security solutions help to mitigate risks associated with theft, diversion and chain of custody. Sensitech's logistics performance solutions deliver origin-to-destination, real-time transparency to any in-transit journey. Sensitech Inc. is an ISO 9001:2008 company, headquartered in Beverly, Mass., with more than 35 sales, service and distribution locations around the world. Sensitech is a part of UTC Climate, Controls & Security, a unit of United Technologies Corp., a leading provider to the aerospace and building systems industries worldwide.
